

WALLET GUIDES

Set up a wallet for TX

Pick your wallet. Each guide goes from install to holding TX, then to staking it with the TOKNS.FI validator.

Last updated: Oct 11, 2026

WALLETS

Pick your wallet

Keplr, and a Ledger used through Keplr, connect to the TOKNS app. The others hold TX too: to use TOKNS, send your TX to a Keplr wallet.

✓ CONNECTS TO TOKNS

Keplr Browser extension	Ledger Hardware · with Keplr
-----------------------------------	--

— DOESN'T CONNECT TO TOKNS YET

Edge Phone	AirGap Phone · two apps	DCENT Phone · Hardware	FoxWallet Phone
Guarda Phone · Desktop · Web			

Not here yet: Frontier, Bitget Wallet and OWallet. None of them has a guide for TX that we could check.

Cosmostation announced in August 2026 that it is shutting down its wallet.

[If you use Cosmostation](#)

TX AT A GLANCE

Check it's the real TX

Wallets that hold many coins can list other tokens with similar names. Real TX runs on its own network: its chain ID is coreum-mainnet-1 and its addresses start with core1. If a wallet asks for details, use these.

NETWORK AND COIN TX	CHAIN ID coreum-mainnet-1	BASE DENOM ucore
-------------------------------	-------------------------------------	----------------------------

DECIMALS

6

ADDRESSES START WITH

core1

UNSTAKING TAKES

STEP BY STEP

Wallet guides

Keplr

Browser extension (Chrome, Firefox, Edge). Keplr's phone app isn't confirmed for TX yet.

✓ CONNECTS TO TOKNS

1 Install Keplr

Get the browser extension from [keplr.app](https://www.keplr.app); Keplr says Chrome is its main browser. Fake copies of Keplr turn up in app stores, so start from the official site.

[Get Keplr](https://www.keplr.app/get) <https://www.keplr.app/get>

2 Create or import a wallet

Create a new wallet, or import one you already have. Write the recovery phrase on paper and keep it offline: anyone who has it can take your TX. Never type it into a website.

3 Add TX

Open the menu at the top left and choose **Add/Remove Chains** (some versions say **Manage Chain Visibility**). Type TX, tick TX and click **Save**. If TX isn't in Keplr yet, TOKNS asks Keplr to add it when you connect in step 5.

4 Receive TX

On Keplr's home screen, click **Deposit**, search for TX and copy your address, or show its QR code. TX addresses start with core1.

5 Stake with TOKNS.FI

Open app.tokns.fi/stake, click **Connect wallet**, choose **Keplr** and approve. Enter an amount, then confirm in Keplr. Once it confirms, your TX is staked with TOKNS.FI. Unstaking takes 7 days.

[Stake with TOKNS.FI](https://app.tokns.fi/stake) <https://app.tokns.fi/stake>

Ledger

Hardware wallet · connects to TOKNS through the Keplr browser extension

✓ CONNECTS TO TOKNS / THROUGH KEPLR

1 Set up your Ledger

Set up the device with Ledger Wallet (formerly Ledger Live), Ledger's own app. Then, in Ledger Wallet, install the **Cosmos (ATOM)** app on your Ledger: TX uses Ledger's Cosmos app. Keep it up to date.

[Get Ledger Wallet](https://shop.ledger.com/pages/ledger-wallet) <https://shop.ledger.com/pages/ledger-wallet>

2 Connect it to Keplr

Install the Keplr browser extension on your computer (see the Keplr guide); Ledger recommends Chrome. Close Ledger Wallet first: Ledger says it can conflict with Keplr. In Keplr, choose **Connect Hardware Wallet** and pick Ledger. Open the Cosmos app on the device, then follow Keplr's steps.

[Keplr guide](#)

3 Add TX

When Keplr asks which chains to use, tick **TX** and press **Save**. Your Ledger gets its own TX address, not the one the same recovery phrase gives in a software wallet: always use the one Keplr shows for your Ledger account.

4 Receive TX

In Keplr, with your Ledger account selected, click **Deposit**, search for TX and copy your address. TX addresses start with core1.

5 Stake with TOKNS.FI

On your computer, open app.tokns.fi/stake, connect **Keplr** and enter an amount. Check the details on your Ledger's screen and approve there. Once it confirms, your TX is staked with TOKNS.FI. Unstaking takes 7 days.

[Stake with TOKNS.FI](https://app.tokns.fi/stake) <https://app.tokns.fi/stake>

Edge

Phone app (iOS, Android)

— DOESN'T CONNECT TO TOKNS YET

1 Install Edge

Get the phone app from edge.app.

[Get Edge](https://edge.app/) <https://edge.app/>

2 Create or log in

Create a new account or log in, and follow the app's backup steps. Keep your login and recovery details offline: anyone who has them can take your TX.

3 Add TX

On the **Assets** tab, tap **+**, search for TX and create the wallet. Edge still shows its ticker as COREUM.

4 Receive TX

Open your TX wallet on the **Assets** tab and tap **Receive**. TX addresses start with core1.

5 Stake with TOKNS.FI

Edge doesn't connect to TOKNS yet. Its own staking offers only two validators, StakeLab and Bware Labs, and you can't choose another; both were jailed (not earning) when we checked on Oct 10, 2026. To stake with TOKNS.FI, send your TX to a Keplr wallet, then stake from TOKNS.

[Keplr guide](#) [Stake with TOKNS.FI](#) <https://app.tokns.fi/stake>

AirGap

Two phone apps (iOS, Android): AirGap Vault keeps your keys on an offline phone, AirGap Wallet sends and receives

— DOESN'T CONNECT TO TOKNS YET

1 Install both apps

Put AirGap Vault on a spare phone that stays offline, and AirGap Wallet on your everyday phone. AirGap also lets you run both apps on one phone, but it recommends a phone kept just for Vault.

[Get AirGap](#) <https://airgap.it/>

2 Create your secret in Vault

In AirGap Vault, create a new secret or import one. Write the recovery phrase on paper and keep it offline: anyone who has it can take your TX.

3 Add TX

In Vault, add an account: tick the row that reads **Texture Capital TX** (AirGap's name for TX) and tap **Create**. Check that the address it shows starts with core1. Then choose **Sync Account** and scan the QR code it shows with AirGap Wallet.

4 Receive TX

In AirGap Wallet, open your TX account and tap **Receive** to show your address. TX addresses start with core1.

5 Stake with TOKNS.FI

AirGap can stake TX itself. Open your TX account in AirGap Wallet and tap **Delegate**, then **Change Validator** on the validator card. Search the list for TOKNS.FI, or open the ... menu, choose **Change Validator** and paste the TOKNS.FI validator address (in TX at a glance). Then sign with AirGap Vault. Change it even if a validator is already filled in: AirGap's own validator was jailed (not earning) when we checked on Oct 10, 2026.

[TOKNS.FI validator address](#)

DCENT

Phone app (iOS, Android) · Biometric Wallet (hardware) · formerly D'CEN

— DOESN'T CONNECT TO TOKNS YET

1 Read DCENT's notice before you start

DCENT reported unauthorized transfers from its **App Wallet** (the wallet inside the phone app) in September 2026, and on Oct 7, 2026 told every App Wallet user to move all their assets out. It says the cause is still being checked. Until DCENT says it's fixed, we're not giving setup steps here. If you already use a DCENT Biometric Wallet, follow DCENT's own guidance.

[DCENT's notice](https://support.dcentwallet.com/announcements/dcent-wallet-notice/app-wallet-incident-0-guidance) <https://support.dcentwallet.com/announcements/dcent-wallet-notice/app-wallet-incident-0-guidance>

2 Use another wallet for now

To hold TX and stake with TOKNS.FI, use Keplr.

[Keplr guide](#)

FoxWallet

Phone app (iOS, Android). Its Chrome extension doesn't hold TX yet.

— DOESN'T CONNECT TO TOKNS YET

1 Install FoxWallet

Get the phone app from foxwallet.com. TX works in the phone app only.

[Get FoxWallet](https://foxwallet.com/download/) <https://foxwallet.com/download/>

2 Create or import a wallet

Create a new wallet, or import one you already have. Write the recovery phrase on paper and keep it offline: anyone who has it can take your TX.

3 Add TX

Go to **Me**, then **Networks**, find **Coreum** and turn it on: FoxWallet still lists TX under its old name. Then, on the **Wallet** page, switch the network to Coreum.

4 Receive TX

On the **Wallet** page, with Coreum selected, tap **Receive**. TX addresses start with core1.

5 Stake with TOKNS.FI

FoxWallet doesn't connect to TOKNS yet. To stake with TOKNS.FI, send your TX to a Keplr wallet, then stake from TOKNS.

[Keplr guide](#) [Stake with TOKNS.FI](#) <https://app.tokns.fi/stake>

Guarda

Phone app (iOS, Android) · Desktop app (Mac, Windows, Linux) · Web wallet

— DOESN'T CONNECT TO TOKNS YET

1 Install Guarda

Get Guarda for your phone or computer, or use its web wallet, from guarda.com.

[Get Guarda](https://guarda.com/download/) <https://guarda.com/download/>

2 Create or import a wallet

Create a new wallet, or import one you already have. Keep the backup Guarda gives you offline: anyone who has it can take your TX.

3 Add TX

On a phone, tap **Add wallet** (the + at the top), then find and choose **Coreum**: Guarda still lists TX under its old name. On a computer the button reads **Create new wallet or connect hardware**; in the web wallet, **Add wallet or connect ledger**.

4 Receive TX

Open your Coreum wallet to copy your address or show its QR code. TX addresses start with core1.

5 Stake with TOKNS.FI

Guarda doesn't connect to TOKNS yet. To stake with TOKNS.FI, send your TX to a Keplr wallet, then stake from TOKNS.

[Keplr guide](#) [Stake with TOKNS.FI](#) <https://app.tokns.fi/stake>

Cosmostation

Phone app (iOS, Android) · Chrome extension

— SHUTTING DOWN / ANNOUNCED AUG 2026

1 Don't start a new wallet here

On Aug 14, 2026 Cosmostation announced it is discontinuing its wallet (the iOS and Android apps and the Chrome extension). From Sept 1, 2026 it only promises that you can export your recovery phrase or private key; it says its other features will be switched off over time. Its old docs site now shows an unrelated page, so don't follow guides from there.

[Cosmostation's notice](#) <https://x.com/IBCwallet/status/2088162092922864114>

2 Already use it? Export your recovery phrase

In Cosmostation, export your recovery phrase and write it on paper. Keep it offline: anyone who has it can take your TX. Never type it into a website.

3 Import it into Keplr

In the Keplr browser extension, import an existing wallet with that phrase (see the Keplr guide). Check that your TX address in Keplr matches the core1 address Cosmostation showed: both wallets use the same TX path.

[Keplr guide](#)

4 Stake with TOKNS.FI

Your TX is now in Keplr. Stake it from TOKNS as in the Keplr guide. Unstaking takes 7 days.

[Stake with TOKNS.FI](#) <https://app.tokns.fi/stake>
